NOTES TO FORM PCT/ISA/220

These Notes are intended to give the basic instructions concerning the filing of amendments under article 19. The Notes are based on the requirements of the Patent Cooperation Treaty, the Regulations and the Administrative Instructions under that Treaty. In case of discrepancy between these Notes and those requirements, the latter are applicable. For more detailed information, see also the PCT Applicant's Guide, a publication of WIPO.

In these Notes, "Article", "Rule", and "Section" refer to the provisions of the PCT, the PCT Regulations and the PCT Administrative Instructions respectively.

INSTRUCTIONS CONCERNING AMENDMENTS UNDER ARTICLE 19

The applicant has, after having received the international search report, one opportunity to amend the claims of the international application. It should however be emphasized that, since all parts of the international application (claims, description and drawings) may be amended during the international preliminary examination procedure, there is usually no need to file amendments of the claims under Article 19 except where, e.g. the applicant wants the latter to be published for the purposes of provisional protection or has another reason for amending the claims before international pollication. Furthermore, it should be emphasized that provisional protection is available in some States only.

What parts of the international application may be amended?

Under Article 19, only the claims may be amended.

During the international phase, the claims may also be amended (or further amended) under Article 34 before the International Preliminary Examining Authority. The description and drawings may only be amended under Article 34 before the International Examining Authority.

Upon entry into the national phase, all parts of the international application may be amended under Article 28 or, where applicable, Article 41.

When?

Within 2 months from the date of transmittal of the international search report or 16 months from the priority date, whichever time limit expires later. It should be noted, however, that the amendments will be considered as having been received on time if they are received by the International Bureau after the expiration of the applicable time limit but before the completion of the technical preparations for international publication (Rule 46.1).

Where not to file the amendments?

The amendments may only be filed with the International Bureau and not with the receiving Office or the International Searching Authority (Rule 46.2).

Where a demand for international preliminary examination has been is filed, see below.

Haw?

Either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed.

A replacement sheet must be submitted for each sheet of the claims which, on account of an amendment or amendments, differs from the sheet originally filed.

All the claims appearing on a replacement sheet must be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims is required. In all cases where claims are renumbered, they must be renumbered consecutively (Administrative Instructions, Section 205(b)).

The amendments must be made in the language in which the international application is to be published.

What documents must/may accompany the amendments?

Letter (Section 205(b)):

The amendments must be submitted with a letter.

The letter will not be published with the international application and the amended claims. It should not be confused with the "Statement under Article 19(1)" (see below, under "Statement under Article 19(1)").

The letter must be in English or French, at the choice of the applicant. However, if the language of the international application is English, the letter must be in English; if the language of the international application is French, the letter must be in French.

NOTES TO FORM PCT/ISA/220 (c ntinued)

The letter must indicate the differences between the claims as filed and the claims as amended, it must, in particular, indicate, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether

- (i) the claim is unchanged;
- (ii) the claim is cancelled;
- (iii) the claim is new;
- (iv) the claim replaces one or more claims as filed;
- (v) the claim is the result of the division of a claim as filed.

The following examples illustrate the manner in which amendments must be explained in the accompanying letter:

- 1. [Where originally there were 48 claims and after amendment of some claims there are 51]: "Claims 1 to 29, 31, 32, 34, 35, 37 to 48 replaced by amended claims bearing the same numbers; claims 30, 33 and 36 unchanged; new claims 49 to 51 added."
- [Where originally there were 15 claims and after amendment of all claims there are 11]: "Claims 1 to 15 replaced by amended claims 1 to 11."
- 3. [Where originally there were 14 claims and the amendments consist in cancelling some claims and in adding new claims]: "Claims 1 to 6 and 14 unchanged; claims 7 to 13 cancelled; new claims 15, 16 and 17 added." or "Claims 7 to 13 cancelled; new claims 15, 16 and 17 added; all other claims unchanged."
- 4. [Where various kinds of amendments are made]: "Claims 1-10 unchanged; claims 11 to 13, 18 and 19 cancelled; claims 14, 15 and 16 replaced by amended claim 14; claim 17 subdivided into amended claims 15, 16 and 17; new claims 20 and 21 added."

"Statement under article 19(1)" (Rule 46.4)

The amendments may be accompanied by a statement explaining the amendments and indicating any impact that such amendments might have on the description and the drawings (which cannot be amended under Article 19(1)).

The statement will be published with the international application and the amended claims.

It must be in the language in which the international appplication is to be published.

It must be brief, not exceeding 500 words if in English or if translated into English.

It should not be confused with and does not replace the letter indicating the differences between the claims as filed and as amended. It must be filed on a separate sheet and must be identified as such by a heading, preferably by using the words "Statement under Article 19(1)."

It may not contain any disparaging comments on the international search report or the relevance of citations contained in that report. Reference to citations, relevant to a given claim, contained in the international search report may be made only in connection with an amendment of that claim.

Consequence if a demand for international preliminary examination has already been filed

If, at the time of filing any amendments under Article 19, a demand for international preliminary examination has already been submitted, the applicant must preferably, at the same time of filing the amendments with the International Bureau, also file a copy of such amendments with the International Preliminary Examining Authority (see Rule 62.2(a), first sentence).

Consequence with regard to translation of the international application for entry into the national phase

The applicant's attention is drawn to the fact that, where upon entry into the national phase, a translation of the claims as amended under Article 19 may have to be furnished to the designated/elected Offices, instead of, or in addition to, the translation of the claims as filed.

For further details on the requirements of each designated/elected Office, see Volume II of the PCT Applicant's Guide.

(54) Title: CONTINUOUS PROCESS FOR MAKING A DETERGENT COMPOSITION

(57) Abstract

A continuous process for preparing granular detergent composition including a first step of dry neutralizing an acid precursor of an anionic surfactant with a particulate water-soluble alkaline material in a high speed mixer for a mean residence time of about 0.2 to about 50 seconds, thereby partly or totally neutralizing the acid precursor and producing a dry neutralized material containing the anionic surfactant, in the form of a free-flowing powder; and a second step of agglomerating the free-flowing powder into a detergent agglomerate using an agglomeration binder. The agglomeration binder is preferably a viscous sufactant paste binder. The resulting agglomerates are dry, free-flowing, and have a substantially more narrow particle size distribution, compared to the free-flowing powder, with reduced fine particles and over-sized particles that generally are recycled.

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Re Item V

- 1) Reference is made to the following documents:
 - D1 WO-A-9732954
 - D2 WO-A-9811193
 - D3 WO-A-9824876
 - D4 WO-A-9820104, cited in the application
- D1 (claims 5-6, pages 5,13) describes a continuous process for preparing granular detergent agglomerates having a density of at least 650 g/l. Liquid anionic surfactant in acid form neutralized with solid builder including sodium carbonate by agitating 1-30 s in a high speed mixer. The resulting product is then agglomerated in a moderate speed mixer where a coating agent can be added. Coating agent (such as zeolite, carbonate, see page 14) may be regarded as agglomeration binder (see also point VIII,3). Thus the subject-matter of claims 1-2 is not novel (Article 33(2) PCT).

The agglomerate in D1 has a size of 300-600 micrometers. The standard deviation is not disclosed in D1; it is therefore not clear if a standard deviation of less than 2,5 is really different. Thus the subject-matter of claim 7 is not novel.

An additional binder can also be sprayed for purposes of enhancing agglomeration. Binders may be water, anionic or nonionic surfactants, PEG, PAC and citric acid. Thus the subject-matter of claims 3-5 is not inventive (Article 33(3) PCT).

The feature of claim 6 is disclosed for the same purpose in D4 (claims). The features of claims 8-10 are also disclosed in D1.

To summarize the subject-matter of claim 6, 8-10 is not inventive.

D2 (example, pages 3-4) and D3 (examples 12-13, claims) describe continuous processes for preparing granular detergent agglomerates having a high density (at least 550 g/l in D2 and 522 or 649g/l in D3). Liquid anionic surfactants in acid form are neutralized with sodium carbonate in a high speed mixer. Said product together with zeolite is then agglomerated in a moderate speed mixer. Zeolite may

INTERNATIONAL PRELIMINARY Inte

be regarded as agglomeration binder. Thus the subject-matter of claims 1-2 is not novel.

The agglomerates in D3 have a mean size of 100-1000 micrometers. The standard deviation is not described in D3; however, it is not clear if a standard deviation of less than 2,5 mentioned in claim 7 is really different from D3. Thus the subject-matter of claim 7 is not novel.

The features of claims 8-10 are also disclosed as alternatives in D2 and D3. The features of claim 6 is disclosed for the same purpose in D4 (claims). To summarize, the subject-matter of claims 6,8-10 is not inventive.

Re Item VII

1) Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the above documents D1 to D3 are not mentioned in the description, nor are these documents identified therein.

Re Item VIII

- 1) There is an inconsistency between the claims and the description. In claim 1 the mean residence time is 0,2-50 s whereas on page 8 said time is preferable.
- 2) It is clear from the description that the following features are essential to the definition of the invention:
 - (1) The particle size distribution of the agglomerates have a mean particle size between 250 and 1200 micrometers and a geometric standard deviation of less than 2,5, see pages 4,6,11.
 - (2) The liquid acid precursor of the anionic surfactant and the particulate alkaline inorganic are introduced **simultaneously** into the high speed mixer, see page 7.
 - (3) The level of surfactant should be more than 15% (high (sic)), see pages 4,5. Since independent claim 1 does not contain these features it does not meet the requirement following from Article 6 PCT taken in combination with Rule 6.3(b) PCT that any independent claim must contain all the technical features essential to the definition of the invention.
